Notes to the Consolidated Financial Statements
for the year ended 31st March, 2026

A liability is treated as current when:

- It is expected to be settled in normal operating cycle;
- It is held primarily for the purpose of trading;
- It is due to be settled within twelve months after the reporting period; or
- There is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

All other liabilities are classified as non-current.

Based on the nature of products and the time between acquisition of assets for processing and their realization in cash and cash equivalents, the Group has ascertained its operating cycle as 12 months for the purpose of current or non-current classification of assets and liabilities.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

c) Presentation currency and rounding-off

All amounts disclosed in these consolidated financial statements and notes are presented in ₹ (in crore), the functional currency of the Group. Items included in the consolidated financial statements of the Group are recorded using the currency of the primary economic environment in which the Group operates (the 'functional currency').

All values are rounded off to two decimals as per the requirement of Division II of Schedule III to the Act, unless otherwise indicated.

d) Basis of presentation

The Consolidated Balance sheet and the Statement of profit and loss are prepared and presented in the format prescribed in Division II of Schedule III to the Act. The Consolidated Statement of Cash Flows has been prepared and presented as per the requirements of Ind-AS 7, Statement of Cash Flows. The disclosure requirements with respect to items in the Balance sheet and Statement of profit and loss, as prescribed in the Schedule III to the Act, are presented by way of notes forming part of the financial statements along with the other notes required to be disclosed under the notified Accounting Standards.

e) Consolidation

The Consolidated financial statements comprise the financial statements of the Company and its subsidiaries as at 31 March 2026.

Where the Group has control over an investee, it is classified as a subsidiary. The Group controls an investee if all three of the following elements are present:

i. power over the investee,

ii. exposure to variable returns from the investee, and

iii. the ability of the investor to use its power to affect those variable returns.

Control is reassessed whenever facts and circumstances indicate that there may be a change in any of these elements of control.

Procedure

i) The consolidated financial statements have been prepared using uniform accounting policies for like transactions and other events in similar circumstances. The accounting policies adopted in the preparation of consolidated financial statements are consistent with those of the previous year.

The financial statements of all entities used for the purpose of consolidation are drawn up to the same reporting date as that of the Holding Company, i.e., the year ended on 31st March.

ii) The consolidated financial statements of the Company and its subsidiaries have been combined on a line by-line basis by adding together the book values of like items of assets, liabilities, income and expenses, after eliminating intra-group balances, intra-group transactions and the unrealized profits/losses, unless cost/revenue cannot be recovered.

iii) The excess cost to the Group of its investment in subsidiaries, on the acquisition dates over and above the Group's share of equity in the subsidiaries, is recognized as 'Goodwill on Consolidation' in the consolidated financial statements. The said Goodwill is not amortized, however, it is tested for impairment at each Reporting date and the impairment loss, if any, is provided for.

iv) Non-controlling interests ('NCI') in the net assets of consolidated subsidiaries are identified and presented in the consolidated Balance Sheet separately within equity.

Non-controlling interests represent that part of the total comprehensive income and net assets of subsidiaries attributable to the interests which is not owned, directly or indirectly, by the Holding Company.

NCI are measured at their proportionate share of the acquiree's net identifiable assets at the date of acquisition. Changes in the Group's equity interest in a subsidiary that do not result in a loss of control are accounted for as equity transactions.

The profit/loss and other comprehensive income attributable to non- controlling interests of subsidiaries are shown separately in the consolidated statement of profit and loss and consolidated statement of changes in equity.[AM1.1]

1.2 Basis of measurement

These consolidated financial statements have been prepared on an accrual basis and a historical cost convention, except for the following assets and liabilities which have been measured at fair value:

- Financial instruments measured at fair value through profit or loss;
- Net defined benefit(asset)/ liability - Fair value of plan assets less present value of defined benefit obligation; and
- Share based payment transactions[AM2.1]

1.3 Summary of key accounting estimates, assumptions and judgments

The preparation of consolidated financial statements requires the management to make judgments, use estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the accompanying disclosures, and the disclosure of contingent liabilities. Uncertainty about these judgements, assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of the asset or liability affected in future periods. Continuous evaluation is done on the estimation and judgments based on historical experience and other factors, including expectations of future events that are believed to be reasonable. Revisions to accounting estimates are recognized prospectively.

In particular, information about material areas of estimates and judgments in applying accounting policies that have the most Material effect on the amounts recognized in the consolidated financial statements are described below:

i) Impairment of Goodwill

For testing of impairment of goodwill, if events or changes in circumstances indicate a potential impairment, as part of the review process, the carrying amount of the Cash Generating Units ('CGUs') (including allocated goodwill) is compared with its recoverable amount by the Group.

The recoverable amount is the higher of fair value less costs to sell and value in use, both of which are calculated by the Group using a discounted cash flow analysis. Calculating the future net cash flows expected to be generated to determine if impairment exists and to calculate the impairment involves Material assumptions, estimation and judgment. The estimation and judgments involve, but are not limited to, industry trends including pricing, estimating long-term revenues growth rates, exit multiples and operating results. The estimated cash flows are developed using internal forecasts. The cash flows are discounted using a discount rate in order to compute present values. An impairment loss recognized for goodwill is not reversed in subsequent periods as per Ind-AS 36 – 'Impairment of assets'.

ii) Provision for warranty

Warranty provision is determined based on the historical percentage of warranty expense to sales for the same types of goods depending upon the warranty period offered. The percentage to the

sales is applied to derive the warranty expense to be accrued. Actual warranty claims are settled against warranty provision. The warranty claims may not exactly match the historical warranty percentage, so such estimates are reviewed annually for any material changes in assumptions and likelihood of occurrence.

The closing warranty provision is bifurcated into current and non-current based on the past settlement trend with the non-current portion being discounted to derive the present value. The assumptions are consistent with prior years. (Refer Note 15)

Estimates are made of the expected reimbursement claim based upon historical levels of recoveries from supplier, applied to the volume of product under warranty as on Reporting date. Supplier reimbursements are recognized as separate asset as expected recoverable from vendors against warranty as recovery from the vendors is considered to be virtually certain.

Expected recoverable from vendors against warranty is bifurcated into current and non-current based on the past recovery trend with the non-current portion being discounted to derive the present value. The assumptions are consistent with prior years. (Refer Note 5)

iii) Estimates related to Share-based payments

Estimating fair value for share-based payment transactions requires determination of the most appropriate valuation model, which is dependent on the terms and conditions of the grant. This estimate also requires determination of the most appropriate inputs to the valuation model including the expected life of the share option, volatility and dividend yield and making assumptions about them. (Refer Note 37)

iv) Taxes

Uncertainties exist with respect to the interpretation of tax regulations, changes in tax laws, and the amount and timing of future taxable income. Given the wide range of business relationships, differences arising between the actual results and the assumptions made, or future changes to such assumptions, could necessitate future adjustments to tax income and expense already recorded. The Group establishes provisions, based on reasonable estimates. The amount of such provisions is based on various factors, such as experience of previous tax audits and differing interpretations of tax regulations by the taxable entity and the responsible tax authority. (Refer Note 19)

Recognition of deferred tax assets/ liability – The extent to which deferred tax assets can be recognized is based on an assessment of the probability of the future taxable income against which the deferred tax assets can be utilized.

v) Measurement of Defined Benefit Obligations, key actuarial assumptions

The cost of the defined benefit plans such as gratuity and leave encashment are determined using actuarial valuations. An actuarial valuation involves making various assumptions that may differ from actual developments in the future. These include the determination of the discount rate, future salary increases and mortality rates. Due to the complexities involved in the valuation and its long-term nature, a defined benefit obligation is highly sensitive to changes in these assumptions. All assumptions are reviewed at each year end.

The principal assumptions are the discount and salary growth rate. The discount rate is based upon the market yields available on government bonds at the accounting date with a term that matches that of liabilities. The salary increase rate takes into account of inflation, seniority, promotion and other relevant factors on long term basis. (Refer Note 33)

Detailed information about each of these estimates and judgements is included in relevant notes together with information about the basis of calculation for each affected line item in the consolidated financial statements.

vi) Expected Credit Loss (ECL)

The Group recognises loss allowance using expected credit loss model for financial assets which are not measured at Fair Value Through Profit or Loss. Expected credit losses are weighted average of credit losses with the respective risks of default occurring as the weights. Credit loss is the difference between all contractual cash flows that are due to the Group in accordance with the contract and all the cash flows that the Group expects to receive, discounted at original effective rate of interest.

For Trade receivables, the Group measures loss allowance at an amount equal to lifetime expected credit losses. The Group computes expected credit loss allowance based on a provision matrix which takes into account historical credit loss experience and is adjusted for forward-looking information. The expected credit loss allowance is based on ageing of receivables and the rates used in provision matrix. The assessment of the correlation between historical observed default rates, forecast economic conditions and ECLs is a significant estimate. The amount of ECLs is sensitive to changes in circumstances and of forecast economic conditions. The Group's historical credit loss experience and forecast of economic conditions may also not be representative of customer's actual default in the future.

vii) Useful lives of Property, Plant and Equipment

The Group reviews the useful life of property, plant and equipment at the end of each reporting period. This reassessment may result in change in depreciation expense in current and future periods.

viii) Contingent liabilities

It is not practicable for the Group to estimate the timings of cash outflows, if any, in respect of the pending resolution of the respective proceedings as it is determinable only on receipt of judgements/ decisions pending with various forums/authorities.

The Group does not expect any reimbursements in respect of the contingent liabilities. The Group's pending litigations comprise of proceedings pending with various direct tax, indirect tax and other authorities. The Group has reviewed all its pending litigations and proceedings and has adequately provided for where provisions are required and disclosed as contingent liabilities where applicable, in consolidated financial statements. The Group does not expect the outcome of these proceedings to have a materially adverse effect on its financial statements.

ix) Lease liabilities

In calculating the present value of lease payments, the Group uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable.

x) Intangible assets under development

The Group capitalizes intangible asset under development for a project in accordance with the accounting policy. Initial capitalization of costs is based on management's judgement that technological and economic feasibility is confirmed. In determining the amounts to be capitalized, management makes assumptions regarding the expected future cash generation of the project and the expected period of benefits.

1.4 Material Accounting Policies

a) Property, plant and equipment ('PPE') and Capital Work-in-Progress

i) Recognition and initial measurement

Land

Freehold land is carried at historical cost. For freehold land, as no finite useful life can be determined, related carrying amounts are not amortized.

Leasehold land is carried at historical cost. For leasehold land, cost of land amortized over lease term as per lease agreement.

Other Tangible assets

PPE other than land, is initially recognized at acquisition cost or construction cost.

The cost of an item of PPE comprises:

- its purchase price, including import duties and non-refundable purchase taxes, after deducting trade discounts and rebates.
- any costs directly attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management.
